## Green Port Hull Welcomes Its First Vessels

Image source: greenporthull

The newly constructed berths, built as part of the Green Port Hull development on Alexandra Dock in Hull, have welcomed their first vessels.

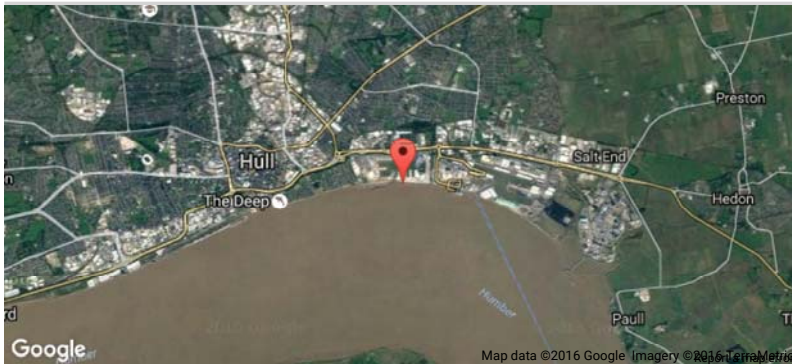

The vessels, Stema Shipping's MV Bulknes and MV Beltnes, are using the berths to deliver almost 400,000 tonnes of crushed stone from Norway, which will be used to surface the Siemens site.

The ships have been brought in by the GRAHAM Lagan Construction Group Joint Venture (JV) which is ABP's main contractor for the enabling works on site.

Bringing the stone by sea will remove 20,000 truck deliveries from the road network.

Three berths have been built by ABP to accommodate wind installation vessels (WIV) visiting the Siemens facility.

The new quayside measures 620m and offers a continuous berthing face.
